WORK HISTORY

Skibidi Tower Defense by Fixated Games: Lead Developer (11/23 to 08/25)

- Regularly developed and deployed large-scale content to 10k+ concurrent players with minimal bugs / problems.
- Developed and shipped TD units on a strict weekly cadence while managing production: planning, scheduling, commissioning models and VFX, assembling assets, and programming functionality.
- Engineered a modular system for deploying in-game events to players, allowing events to be easily implemented, scheduled, and removed without problems.
- Overhauled and modernized the game's core GUI using Fusion 3.0 with scalable and maintainable components.
- Conducted expansive market research, finding deep insights into the Skibidi fanbase and Roblox's trends / metas.
- Leveraged Notion to create internal roadmaps for effective planning and deadline management.

Land of Merchants by Supersocial: Lead Developer (04/21 to 02/22)

<https://pinecrumb.github.io/land-of-merchants>

- Recruited and managed a team of contractors, writing intricate instructional guide documents and initiating open channels for progress communication.
- Frequently collaborated with upper management to scope out features, roadmaps, and timelines.
- Built an active discord community of 2,000 members prerelease.
- Engineered an innovative system for efficient AI pathfinding in a vast open world, writing a plugin that prebakes paths for traversal without needing physics or ground check raycasts.
- Wrote and integrated a behavior algorithm that calculates AI customer item preferences and translates output into expressive features.
- Engineered an immersive crafting system featuring diegetic UX in the game world.

SteelFront by RareFront: Cocreator and Developer (10/22 to 03/23)

<https://pinecrumb.github.io/steelfront>

- Engineered a versatile destruction system, offering players an unparalleled fully destructible combat experience. Utilized algorithms such as mark and sweep and object pooling.
- Engineered versatile component-based combat vehicles that are fully destructible, using advanced replication techniques to ensure optimal smoothness for clients.
- Devised an intricate building system, empowering players to build complex functional structures.

Robbery Simulator 2.0 by Voldex: Lead Programmer (05/20 to 05/21)

<https://www.roblox.com/games/2822624110/Robbery-Simulator>

- Adapted to a pre-existing codebase, adopting stylistic guidelines for consistency and cohesion.
- Onboarded programmers into the codebase and conducted code reviews.
- Engineered a versatile mission system, enabling designers to create diverse missions.
- Blocked out play areas and closely collaborated with artists for high quality missions.
- Deployed missions to millions of players in a 2.0 update, tracked bugs with GameAnalytics, and reviewed player feedback collected from an in-game feedback prompt.

Titan God Simulator by Modblox: Full Stack Programmer (07/19 to 04/20)

<https://www.roblox.com/games/2870343637/Titan-God-Simulator>

- Launched an original title from its inception to 2.5M+ players.
- Engineered core simulator game mechanics: pets, pet inventory, pet trading, "Pet Dex", egg opening, boosts, daily challenges, and leaderboards.
- Demonstrated post-release commitment by promptly resolving bugs, integrating user feedback, and closely following a tight update roadmap.
- Worked with QA to resolve issues prerelease.
- Onboarded and guided new programmers during post-launch phase.
- Translated complex UI designs from photoshop files into Roblox studio, modularly separating assets and assembling them into robust scalable interfaces for all devices.
